Question:
Using integration, find the area of the region bounded by the parabola $y^2 = 4x$ and the circle $4x^2 + 4y^2 = 9$.
Solution: The parameters of the conics are

Variable	Description
V_1, u_1, f_1	Parameters of Parabola
V_2, u_2, f_2	Parameters of circle
P_1, P_2	Points of intersection
A	Area between the conics

TABLE 0: Variables Used

$$V_1 = \begin{pmatrix} 0 & 0 \\ 0 & 1 \end{pmatrix}, \; u_1 = \begin{pmatrix} -\frac{1}{2} \\ 0 \end{pmatrix}, \; f_1 = 0 \tag{0.1}$$

$$V_2 = \begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix}, \; u_2 = \begin{pmatrix} 2 \\ 0 \end{pmatrix}, \; f_2 = -4 \tag{0.2}$$

The intersection of two conics with parameters $V_i, u_i, f_i, \; i = 1, 2$ is defined as

$$x^T (V_1 + \mu V_2) x + 2 (u_1 + \mu u_2)^T x + (f_1 + \mu f_2) = 0 \tag{0.3}$$

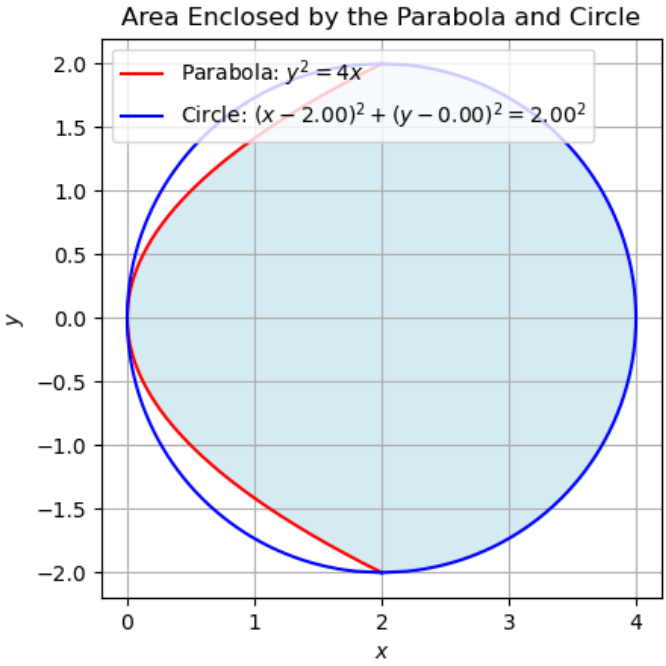
Solving this the points of intersection are

$$\begin{pmatrix} 0 \\ 0 \end{pmatrix}, \begin{pmatrix} 2 \\ -2 \end{pmatrix}, \begin{pmatrix} 2 \\ 2 \end{pmatrix} \tag{0.4}$$

Area between the curves is,

$$2 \int_0^2 \left(2 + \sqrt{4 - y^2} - \frac{y^2}{2} \right) dy \tag{0.5}$$

By solving the integration, we get area is equal to 11.62 sq.units



Area Enclosed by the Parabola and Circle
Parabola: $y^2 = 4x$
Circle: $(x - 2.00)^2 + (y - 0.00)^2 = 2.00^2$
